SUMMARY

Experienced **Frontend Developer** with **3 years in tech solutions** and digital products. Proven success in optimizing developer workflows and engineering advanced AI-driven web applications, including interactive AI chat interfaces, data visualization for statistics, and fact-checking platforms. Deeply skilled in Next.js, Nuxt, Vue, and React (TypeScript), with a strong focus on UI architecture, real-time data streaming (SSE/WebSockets), and high-performance API integration.

WORK EXPERIENCE

PT. Kaze Digital Indonesia - Indonesia

December 2023 - Present

Frontend Developer

- Designed and implemented scalable frontend architecture using **Vue** and **TypeScript** across 3 distinct products and client projects to streamline development workflows and ensure high UI consistency across engineering teams.
- Designed and engineered optimized prompts to automate API generation, reducing development turnaround time by **40%** and accelerating integration workflows across frontend teams.
- Managed task prioritization and sprint alignment based on business impact, ensuring predictable delivery timelines and maintaining technical stability across teams.
- Conducted technical mentoring and knowledge-sharing sessions to elevate team coding standards and ensure high engineering alignment.
- Engineered scalable geospatial visualization tools using **Tegola** (vector tile server) and **Mapbox GL JS** to render complex statistical data layers and high-density media monitoring maps.
- Engineered interactive AI Chat interfaces featuring real-time data streaming (**SSE/WebSockets**) and robust state management using **Pinia** for seamless user experience.
- Implemented resilient real-time data streaming (**SSE/WebSockets**) mechanisms by introducing delay-based disconnect validation and connection timeout handling, ensuring controlled recovery flows when unstable connections occurred.
- Developed advanced AI-driven data visualization and fact-checking tools using **Bulma** and complex charting libraries to deliver actionable statistical insights.
- Collaborated with cross-functional teams to define strict technical requirements and maintained high production stability through automated testing.

PT. Surya Microsystems - Indonesia

April 2023 - December 2023

Frontend Developer

- Applied maintainable, component-based frontend approaches across concurrent projects using **Vue.js** and **Element Plus (element.io)** UI library, enhancing scalable product development and accelerating time-to-market.
- Led development priorities based on client feedback and business value, successfully stabilizing sprint velocity and delivering structured weekly progress transparency.
- Spearheaded client project demos and system socialization sessions, improving technical clarity and building strong stakeholder alignment.
- Maintained and optimized multiple web-based production applications to secure uninterrupted business continuity, including the LSP Website (**Vue.js & Laravel**), Cost Control App (**CodeIgniter**), and Village Website (**Laravel**).

PROJECTS

Chaplin - [Chaplin](#) - June 2026

[Link Project](#)

- Designed and implemented scalable **full-stack architecture** using **Next.js, React, TypeScript, Tailwind CSS, NestJS, Prisma, and PostgreSQL**, enabling consistent, maintainable, and high-performance application development.
- Automated **AI-powered workflows** using **DeepSeek, Jina Embeddings, BullMQ, and PostgreSQL**, reducing development turnaround time by **40%** while improving workflow reliability.
- Improved application performance through **Redis caching, asynchronous job processing**, and optimized database queries, ensuring scalable and reliable API request handling.
- Engineered **real-time and intelligent user experiences** with **SSE streaming, WebSocket, semantic search, and AI embeddings**, delivering instant interactions and advanced data retrieval capabilities.
- Built secure and standardized application infrastructure using **JWT, NextAuth.js, Swagger, and centralized error handling**, simplifying authentication and frontend-backend integration.
- Optimized frontend scalability with **TanStack Query, Zustand, Shadcn/UI, responsive design, and TypeScript**, reducing boilerplate, accelerating feature delivery, and maintaining UI consistency across platforms.
- Established engineering best practices through **ESLint, SonarQube, CI/CD, architecture governance, and TypeScript strict mode**, improving code quality, deployment consistency, and long-term maintainability.

Blayer - [Blayer](#) - Mei 2026

[Link Project](#)

- Designed and developed an **AI-powered full-stack development platform** using **Next.js 14, React 18, TypeScript, Tailwind CSS, Shadcn/UI, Node.js, Prisma, and PostgreSQL**, enabling rapid feature delivery while maintaining scalable architecture and type safety.
- Built an **MCP (Model Context Protocol) server** with **Node.js and TypeScript**, integrating seamlessly with **Claude Desktop** and other MCP-compatible clients to automate AI-assisted development workflows.
- Engineered an **AI-driven code generation system** powered by the **Claude code**, reducing manual code scaffolding by **40%** while automatically enforcing architecture standards through embedded project conventions.
- Implemented **centralized state and data management** using **TanStack Query, Zustand, React Hook Form, and Zod**, reducing boilerplate by **50%**, minimizing validation issues, and improving application reliability.

Casetudy - [Casetudy](#) - Jan 2026

[Link Project](#)

- Designed and implemented a scalable frontend architecture using **Next.js 14, React, and TypeScript** with a layered feature-module pattern, streamlining data-fetching logic and ensuring consistent state management across the case-studies module.
- Engineered an **AI-driven code generation system** powered by the **Claude code**, reducing manual code scaffolding by **40%** while automatically enforcing architecture standards through embedded project conventions.
- Collaborated closely with cross-functional teams to discuss feature requirements, user flows, and product behavior, translating business needs into clear implementation plans and ensuring alignment between design, product, and development throughout the feature lifecycle.
- Engineered a headless **CMS-driven** content platform by integrating a custom Axios/Fetch API client with a **Strapi** backend, implementing token-based authentication and Strapi-formatted pagination to deliver reliable, scalable data retrieval.

EDUCATION

Vocational High School Degree in Computer and Network Engineering (TKJ)

SMKN 2 Cikarang Barat – Bekasi, Jawa Barat

June 2020 – April 2023

SKILLS

- **Frontend Engineering** (Vue.js, Nuxt, Next.js, React, TypeScript, JavaScript, UI Architecture, Component-Based Design, State Management, Tailwind CSS, Bulma, HTML, CSS)
- **UI/UX Design:** (Design Systems, Responsive Design)
- **API & Integration** (REST API, Server-Sent Events (SSE), Data Visualization (Highcharts))
- **AI Engineering** (Prompt Engineering, Context Engineering, LLM Integration)
- **Artificial Intelligence (AI) Tools** (Claude Code, DeepSeek, ChatGPT, Gemini)
- **Testing & Tools** (Git, Webpack, Vite, Unit Testing, Technical Documentation)
- **Methodologies & Management** (Agile/Scrum, Sprint Planning, Task Prioritization, Scalability Planning)
- **Leadership** (Technical Mentoring, Knowledge Sharing)

LANGUAGES

- **Indonesia** (native)
- **English** (intermediate)
